Instructions for Wearing your Scoliosis Brace

Modified from Boston Scoliosis Brace course instruction manual presented by NOPCP and Children’s Hospital Medical Center, Boston, MA

Goals:

- In 2-3 weeks be wearing the brace 23 hours a day
- Transition to part-time wear as correction progresses
- Wean completely out of the brace as curvature corrects

Your physician will make the decision to progress from full-time to part-time wear, and when enough correction has occurred to discontinue use of brace.

This requires:
1) Your brace be put on properly
2) Your skin be looked after
3) Your brace be cleaned daily
4) You to start your brace wearing gradually
PUTTING THE ORTHOSIS ON:

- Proper brace application initially TAKES TWO PEOPLE, the wearer and a helper. This keeps the brace from being twisted when it is put on.
- The brace is worn over a cotton undershirt with pants worn over the brace. For girls the brace is worn over the bra.
- Putting the brace on:
  1) Wearer stands and the helper stands behind holding the brace in the left hand.
  2) The helper puts the brace in front of the patient with the opening at the back.
  3) The helper reaches around the patient with an arm on each side of the patient and spreads the brace wide enough so the patient can step into the brace.
  4) Make sure all the straps are outside the plastic girdle.
  5) Make sure the brace is not twisted and is facing straight ahead. The opening of the brace should in the middle of the back so that the bumps on the spine and the crease between the buttocks are halfway between each edge.
  6) BEND YOUR HIPS AND KNEES about 45 degrees.
      The brace will only fit properly if this is done.
  7) With your hands on the “hips” of the brace, push the brace toward your feet so the pads on the inside of the brace fit above your hip bones.
  8) Pull the extra cloth of the undershirt out at the brace opening. Make sure there are no wrinkles in the undershirt.
  9) The helper threads the straps through the loops and fastens the Velcro.
  10) Tighten brace by applying pressure to side of the brace opposite to the loop.
      And refastening Velcro. If you are unable to secure the brace this way, the wearer may lie on a firm surface.
  11) If using the “side lying method” secure brace loosely, lie on the floor, bend knees and the helper leans on the side of the brace squeezing the brace to the lines, while pulling the straps.
  12) When the brace is on as tightly as possible, fasten the Velcro.

SKIN CARE:
It is very important to PREVENT SKIN BREAKDOWN (that is sore, red, raw skin). The skin under the brace needs to be toughened up, especially where the brace presses the hardest.

To Protect the Skin:
1) Bathe daily (bath or shower)
2) Apply rubbing alcohol with your hands to all parts of the skin that the brace covers, especially the areas where the skin is pink and the areas where the brace presses. Simply rub the alcohol into the skin. The alcohol plus the friction between your Hand and body toughens the skin.
3) Observe skin frequently when brace is first used (look for pink areas).
4) Initially, DO NOT USE CREAMS, LOTIONS OR POWDER under the brace.
   If dry skin occurs, consult your doctor.
5) Always wear a tubular knit, 100% cotton undershirt, T-shirt or sleeveless tank-top
without side seams under the brace.
6) If you wear the brace loosely, it will move around and cause more skin problems
by rubbing. WEAR YOUR BRACE AS TIGHTLY AS POSSIBLE.

If there is skin breakdown (sore, red or raw skin) the brace must not be reapplied until
the skin heals - one day or more. If this happens, call your orthotist. The problem may be
solved over the phone. Sometimes the skin over the waist and hips gets darker. That is
common and is not a problem. When the brace treatment is over, this color will go away.

WASH THE BRACE EACH DAY.
The hard plastic outer shell and the inner soft foam plastic SHOULD BE CLEANED
EVERY DAY. A cloth with soap and water can be used to clean the lining followed by
rinsing with a damp cloth. A Terry towel can help dry the foam plastic. The brace will
dry by itself in 20-30 minutes. If the brace is needed soon, a very cool hair blower can be
used to dry it in 5-10 minutes. The outer plastic can tolerate rough cleaning. The plastic
brace should not be left in very hot sun or by a warm radiator as the plastic may soften
and lose its shape. Rubbing Alcohol may also be used to clean the brace. Simply wipe
out the inside of the brace with alcohol and rinse with water. This will prevent a soap
build-up.

STARTING THE BRACE WEARING.
Getting used to your brace is like getting used to some new tight shoes. The following
program is suggested to help your skin and muscles adjust to having the brace on. It is a
gradual build-up of time that usually takes 2 to 3 weeks.

STAGE I: (Goal: To wear the brace for 6 hours)
1) Don the brace properly and wear it for 2 hours. Take the brace off, check
   skin and give skin care with the rubbing alcohol.
2) If the skin is PINK, put the brace back on for two or more hours then recheck the skin.
   Do this again for a third 2-hour period.
3) If the skin is RED or sore, the brace must be left off for a half hour then put on again.
4) It is important that you can tell the difference between PINK and RED skin.
5) This stage usually lasts 5-7 days.

STAGE II: (Goal: To wear the brace for 10 hours)
1) If the brace is well tolerated for Stage I, the next stage is wearing the brace for 10
   hours. If it is difficult to accomplish this stage during a school day, this stage
can be done during a weekend.
2) Wear the brace for 4 hours. Check the skin and give skin care. Put the brace back on
   and in 2 hours check the skin. Give skin care and put the brace back on. Repeat
   this every two hours until you have worn the brace 10 hours.
3) If the skin is RED and sore, wait a half hour before putting the brace back on.
STAGE III: (Goal: To wear the brace for 18 hours)
Once the brace is tolerated for 10 hours you can proceed to wearing the brace for 20 hours a day. This can be done by putting the brace on in the morning before going to school.
1) Four hours later, at lunchtime, take the brace off and check your skin and rub with alcohol. Put the brace on again. You'll need the help of a school nurse or friend for this and she'll need to learn how to apply your brace. After school take the brace off, check the skin and give skin care.
2) Leave the brace off for 4-5 hours and reapply at bedtime.
3) Leave the brace on all night. It should be worn all night without checking unless the wearer complains of excessive discomfort.
4) This stage is harder because most people are very nervous about wearing the brace to school at first.
5) This stage will usually last 2-3 days.

STAGE IV: (Goal: To wear the brace 23 hours a day)
1) Once you can sleep in the brace overnight, you move on to wearing the brace all day and night except for one hour. The hour out of the brace is used for skin care, brace washing and the out-of-brace exercise (remember you have exercises to do in the brace as well).
2) In addition, you should have skin care twice more during the day.

A HELPFUL SCHEDULE IS: Before bed wash the brace. While it is drying, do your exercises, take a bath or shower and give skin care. Put on a clean undershirt, then put the brace on for the night. In the morning - take the brace off for skin care and put on a clean undershirt. Put the brace back on. After school take the brace off for skin care. Put on a clean undershirt and put the brace back on.

Some Notes on Skin Care:
1) Do not move on from one stage to the next until the first is completed.
2) Continue the Stage IV skin care regimen after you are comfortable in the brace.
3) Report skin problems to your doctor, who may suggest an alternate skin cares.
4) Call for an earlier clinic appointment if your brace or skin problems continue.
5) Initially, the brace may be loosened slightly during meals if needed.
   Eating smaller portions more frequently may help.

CLOTHING: As a rule, loose fitting clothes will not reveal the outline of your brace. Pants will usually be at least one size larger. Pants with elastic waistbands or drawstrings may fit more easily.

WHAT CAN YOU DO IN YOUR BRACE?
Almost anything you want to try in your brace is all right-- basketball, baseball, horseback riding, gym, tennis. You can swim in your brace if need be. If you swim in salt or chlorinated water, wash the brace well with fresh water, then use towel to dry. Generally you may swim without your brace since the water will support your back. Check with your doctor for specific instructions about swimming and other activities. Your bicycle seat may also need adjustment to sit and pedal comfortably.
